

# AI-Automated Job Search System

ATS Resume Engine + LinkedIn/Naukri Profile Sync + Application Automation, built with Claude

*Prepared for: Nishant | Date: August 26, 2026*

# Contents

---

1. System Overview
2. Module 1 — ATS Resume Engine
3. Module 2 — Resume Quality Assurance (QA)
4. Module 3 — LinkedIn & Naukri Profile Sync
5. Module 4 — Job Discovery & Alerts
6. Module 5 — Application Engine
7. Module 6 — Tracking Dashboard
8. Automation Cadence (Scheduled Tasks)
9. Step-by-Step Setup in Claude / Cowork
10. Credits & Cost Notes: Semi- vs Fully-Automated
11. Risk & Compliance Summary
12. Appendix — ATS Resume Checklist & Master Profile Template

# 1. System Overview

---

The system has four connected modules that turn a messy set of old resumes, a new resume, and a LinkedIn export into a continuously-optimized job search pipeline:

13. Resume Engine — merges all your source documents into one Master Career Profile, then generates a tailored, ATS-friendly resume per job description (JD), scored and QA-checked before you see it.
14. Profile Sync — keeps your LinkedIn and Naukri profiles aligned with your latest resume/skills (semi- or fully-automated).
15. Discovery & Application Engine — finds new openings matching your target roles on a schedule, tailors materials, and either pre-fills or submits applications.
16. Tracking Dashboard — a single live view of every application, its status, and follow-up dates.

## Core tools used (all inside Claude / Cowork):

- Claude in Chrome — reads and interacts with LinkedIn/Naukri/job-board pages inside your own logged-in browser (not a separate scraper/API), which is the lowest-detection way to automate a browser session.
- Scheduled Tasks — runs the daily/weekly digest, profile-review, and apply cycles automatically.
- Docx/PDF/XLSX skills — generate the resume, cover letters, and the application tracker as real files.
- Cowork Artifact — an optional live dashboard page you can reopen anytime to see application status without re-asking Claude.

# 2. Module 1 — ATS Resume Engine

---

## 2.1 Inputs

- Old resume(s) — any version(s) you have, PDF/DOCX.
- Current/new resume — your latest draft, if any.
- LinkedIn export — download "Save to PDF" from your LinkedIn profile, or the full data export (Settings → Data Privacy → Get a copy of your data).
- (Optional) Target job description(s) — the postings you want the resume tailored against.

## 2.2 Process

17. Parse everything you upload and reconcile overlaps/conflicts (e.g., different phrasing of the same role, gaps, outdated titles).
18. Build one Master Career Profile: every job, project, skill, certification, and quantified achievement you have ever listed, deduplicated and dated.
19. For a specific application: extract the JD's required skills, tools, and phrasing (the exact keywords the ATS will search for).
20. Generate a tailored resume from the Master Profile that mirrors the JD's language, reorders bullets by relevance, and quantifies impact wherever the source material supports it.
21. Format to ATS-safe rules (see 2.3) and export as both .docx and .pdf.

## 2.3 ATS Formatting Rules Claude Applies

- Single-column layout; no tables, text boxes, columns, headers/footers with contact info, icons, or images of text — these are the layouts modern ATS parsers (Workday, Greenhouse, Lever) most often mis-read.
- Standard section headings: Summary, Skills, Experience, Education, Certifications.
- Standard fonts (Arial/Calibri/Times New Roman), 10.5-12pt body, 1-2 pages.
- Keywords pulled from the JD are worked into Skills and Experience naturally — never stuffed or hidden (white-on-white / zero-opacity text is actively flagged by modern ATS and will get you rejected, not ranked higher).
- File named consistently: FirstLast\_Resume\_CompanyName.docx.

## 3. Module 2 — Resume Quality Assurance (QA)

---

Every generated resume goes through a two-pass check before it reaches you — this is the "properly checked" step you asked for.

### 3.1 Pass 1 — Automated Rubric Check

| Check              | What Claude verifies                                                                                   |
|--------------------|--------------------------------------------------------------------------------------------------------|
| Formatting         | No tables/columns/graphics; standard fonts; consistent bullet style; 1-2 pages                         |
| Keyword match      | JD hard-skills coverage rate (target: 70-90% of JD keywords present, in context)                       |
| Quantification     | Bullets include a number, %, or scale where the source material allows it                              |
| Consistency        | Titles/dates/companies match exactly across resume, LinkedIn, and Master Profile                       |
| Grammar & tense    | Past roles in past tense, current role in present tense, no first-person pronouns                      |
| Contact & links    | Correct email/phone; LinkedIn URL present; no dead links                                               |
| ATS score simulate | Claude re-parses its own output as plain text to confirm nothing gets lost or garbled by an ATS parser |

### 3.2 Pass 2 — Human-Readable Diff

Claude shows you a before/after summary of what changed from your last version (new keywords added, bullets reworded, sections reordered) so you approve the substance, not just the formatting, before it is used to apply anywhere.

### 3.3 Optional Pass 3 — Independent Review

For high-stakes applications, ask Claude to run a second, independent review pass (a fresh read against the JD with no memory of how the resume was built) to catch anything the generation pass missed — the same "second opinion" pattern used for code review.

## 4. Module 3 — LinkedIn & Naukri Profile Sync

4.1 Path A — Semi-Automated (Recommended default, lower credit use)

- 22. Claude in Chrome opens your already-logged-in LinkedIn/Naukri tab and reads your current profile fields.
- 23. It diffs those fields against your Master Career Profile / latest resume and produces a short list of suggested edits (headline, About, Skills, Experience bullets).
- 24. You review the list and click Save yourself, at your own pace — this keeps every write action a genuine human action, which is the behavior the platforms are actually trying to detect the absence of.
- 25. Runs on a schedule (e.g., every 2 weeks) so drift between resume and profile never grows large.

4.2 Path B — Fully Automated (Pro/Max plans, higher credit use)

- 26. Same read + diff as Path A, but Claude in Chrome also types the changes into the field and clicks Save itself, inside your normal logged-in browser session (still not a separate API/scrapper).
- 27. Recommended guardrails: cap edits to 1 run per 1-2 weeks, never run back-to-back with the application engine in the same session, and keep total actions per day well under LinkedIn's posted limits (e.g., under 3% of your network for any connection-related activity).
- 28. Because this issues real write actions without a human click, it is the path most likely to trip automation detection if run too frequently — use it deliberately, not continuously.

5. Module 4 — Job Discovery & Alerts

Rather than scraping LinkedIn/Naukri search results (a common trigger for detection), the primary discovery path uses:

- Company career pages and mainstream job boards/RSS via web search — no login, no ToS conflict.
- Your own saved searches / job alerts on LinkedIn and Naukri, which you set up once manually — Claude in Chrome then just opens that already-saved-search page and reads the results (a normal page visit, not scraping a search).

Both paths, semi vs. full

|             | Semi-Automated                                                                          | Fully-Automated                                                                                |
|-------------|-----------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------|
| Discovery   | Claude finds candidate openings and produces a daily/weekly digest for you to shortlist | Same, but Claude also auto-shortlists anything above a fit-score you set (e.g., 80%+ JD match) |
| Your effort | You confirm which openings to pursue                                                    | You spot-check the shortlist periodically                                                      |

## 6. Module 5 — Application Engine

---

### 6.1 Path A — Semi-Automated

- 29. For each shortlisted opening, Claude tailors the resume (Module 1) and drafts a matching cover letter.
- 30. Claude in Chrome opens the application page and pre-fills the form fields (name, work history, screening questions) from your Master Profile.
- 31. Claude stops before the final Submit — you review the filled form and click Submit yourself.
- 32. Lowest credit use: one browser session per application, no repeated polling.

### 6.2 Path B — Fully Automated (Pro/Max plans)

- 33. Same tailoring and pre-fill as Path A, but Claude also clicks Submit for any opening at or above your fit-score threshold.
- 34. Every auto-submitted application is logged immediately to the Tracking Dashboard with the resume version used, so nothing is a "black box."
- 35. Recommended guardrail: cap auto-applies per platform per day (e.g., 5-10) to stay well inside normal human usage patterns and avoid both platform detection and looking spammy to recruiters.

Why not go fully-automate it every where

## 7. Module 6 — Tracking Dashboard

---

Every application (from either path) is logged with: Date Applied, Company, Role, JD link, Match score, Resume version used, Application status, Next follow-up date.

- Lightweight option: an Excel tracker (built with the xlsx skill) that Claude updates after each run.
- Live option: a Cowork Artifact — a page you reopen anytime that re-reads the tracker and shows status at a glance, with a Reload button; no need to re-ask Claude for a status update.

## 8. Automation Cadence (Scheduled Tasks)

---

| Task                                      | Suggested cadence                      | Path           |
|-------------------------------------------|----------------------------------------|----------------|
| Job discovery digest                      | Daily, 8:00 AM                         | Either         |
| Application run (tailor + apply/pre-fill) | 2-3x per week                          | Either         |
| Profile sync review                       | Every 2 weeks                          | Either         |
| Resume/Master Profile refresh             | After every new role, cert, or project | Manual trigger |
| Tracker digest / stale-application check  | Weekly                                 | Either         |

Each of these can be set up as a Claude scheduled task in one request, e.g. "Every weekday at 8am, check for new openings matching [target roles] and send me a digest."

## 9. Step-by-Step Setup in Claude / Cowork

---

36. Upload your old resume(s), current resume, and LinkedIn PDF export in one message; ask Claude to build your Master Career Profile document.
37. Review the Master Profile once — correct any misread dates/titles. This becomes the single source of truth for everything downstream.
38. Connect Claude in Chrome and log into LinkedIn and Naukri manually in that browser (Claude never sees or stores your password — it operates the browser session, not your credentials).
39. Set up your saved searches/job alerts directly on LinkedIn and Naukri as you normally would (target titles, locations, seniority).
40. Tell Claude which path you want per module (semi- or fully-automated) — you can mix, e.g., full-auto discovery digest + semi-auto applying.
41. Ask Claude to set up the scheduled tasks from Section 8.
42. Ask Claude to create the Tracking Dashboard (Excel file or live Artifact).
43. From here: each cycle, Claude either (a) sends you things to review/click, or (b) auto-executes within the guardrails you set and logs everything for your review.

## 10. Credits & Cost Notes: Semi- vs Fully-Automated

---

|                              | Semi-Automated                                         | Fully-Automated                                                      |
|------------------------------|--------------------------------------------------------|----------------------------------------------------------------------|
| Browser tool calls per cycle | Low — one read/prefill pass, you finish manually       | Higher — read, write, verify, and confirm-submit steps each run      |
| Best suited for              | Free/Pro users, or anyone cost-conscious               | Pro/Max plans with higher usage headroom                             |
| Platform ban risk            | Minimal — every write action is a genuine human click  | Real, if run too frequently — mitigate with the caps in Sections 4-6 |
| Speed                        | You are the bottleneck (a few minutes per application) | Near-zero touch, but needs periodic spot-checks                      |

## 11. Risk & Compliance Summary

---

- This system is for your own personal job search on your own accounts — not for operating other people's accounts or bulk/commercial use.
- Automation of LinkedIn/Naukri writes (profile edits, applies, connections) is against both platforms' Terms of Service; the Semi-Automated paths minimize this risk by keeping a human click on every write action, the Fully-Automated paths reduce but do not eliminate it.
- Keep volumes low and human-like: infrequent profile edits (every 1-2+ weeks), a capped number of daily applications, and no simultaneous multi-account or multi-session use.
- If an account is ever restricted, pause all automation on that platform immediately and revert to fully manual use until it clears.
- Nothing here bypasses a platform's login/CAPTCHA/2FA — Claude in Chrome operates your own authenticated browser session, it does not use scraping APIs or credential automation.

## 12. Appendix — ATS Resume Checklist & Master Profile Template

---

### A. Quick ATS Checklist

- Single column, no tables/text boxes/graphics/icons
- Standard section headings (Summary, Skills, Experience, Education)
- Standard font, 10.5-12pt, 1-2 pages
- Top JD keywords present in Skills + Experience, in natural language
- Quantified bullets (numbers, %, scale) wherever possible
- Consistent job titles/dates/companies across resume, LinkedIn, and Master Profile
- No hidden/white text keyword stuffing — actively penalized by modern ATS
- File named FirstLast\_Resume\_Company.docx; PDF version also exported

### B. Master Career Profile — Sections to Include

- Contact info + LinkedIn URL
- Professional summary (2-3 sentences, role-agnostic)
- Full skills inventory (technical + soft), tagged by proficiency/recency

- Every role: title, company, dates, 4-8 bullets with quantified impact
- Education, certifications, licenses
- Projects / publications / awards (optional but useful for keyword coverage)
