Summary

Final-year Electronics and Telecommunication engineering student (9.27 CGPA) with strong technical competence in Data Analytics, Python, SQL, and Statistical Modeling. Experienced in building automated ETL pipelines, performing Exploratory Data Analysis (EDA) on structured and time-series datasets, and developing machine learning models using Pandas, NumPy, and Scikit-Learn. Skilled at transforming raw telemetry and business metrics into actionable insights via Matplotlib, Seaborn, and interactive dashboards. Proven track record deploying cloud data solutions on AWS and solving quantitative engineering challenges.

Skills

Programming & Querying: Python (Pandas, NumPy, Scikit-Learn, SciPy), SQL (PostgreSQL, MySQL), Bash, C

Data Analytics & Modeling: Exploratory Data Analysis (EDA), Statistical Testing, Data Wrangling, Time-Series

Data Visualization & BI: Matplotlib, Seaborn, Plotly, Tableau, Power BI, Advanced Excel (Pivot Tables)

Cloud, Databases & ETL: AWS (DynamoDB, Lambda, S3, API Gateway), PostgreSQL, REST APIs, Docker, Git

Soft Skills: Analytical Problem Solving, Data Storytelling, Business Acumen, Cross-Functional Collaboration

Education

Bachelor's Degree in Electronics and Telecommunication 2027
Walchand Institute Of Technology *CGPA: 9.27*

Higher Schooling 2023
D.H.B Soni College, Solapur *Percentage: 83%*

Work Experience

Data & Telemetry Analytics Intern May 2025 – June 2025
Codec Technologies India *Remote*

- Designed automated data ingestion pipelines to process serial communication logs (UART, I^2C), reducing latency by 35%.
- Performed exploratory data analysis and statistical anomaly detection on sensor logs, identifying 10+ defect patterns.
- Structured and queried time-series device logs using SQL and Python to build automated data health reports.
- Managed version-controlled analytical scripts and reproducible pipelines using Git and GitHub in a Linux environment.

Technologies: Python, SQL, Pandas, NumPy, Time-Series Analysis, ETL Pipelines, Git, Linux

Projects

LabPulse – Cloud Telemetry & Quantitative Analytics Platform 2026

- Engineered an end-to-end data pipeline streaming user session telemetry to an AWS serverless data lake (DynamoDB, S3).
- Implemented statistical outlier detection and usage analytics in Python, processing over 10,000+ daily telemetry events.
- Containerized analytics workloads using Docker and established CI/CD automation via GitHub Actions.
- Designed dynamic reporting dashboards tracking peak system concurrency, device error rates, and user engagement metrics.

Role: Backend Lead, Cloud & Data Pipeline

Tech Stack: Python, SQL, Pandas, AWS DynamoDB, Lambda, S3, Docker, GitHub Actions

AQUANOVA – IoT Telemetry Analytics & Predictive Anomaly Detection 2025

- Developed an IoT telemetry analytics engine in Python (Pandas, Scikit-Learn) to predict pipeline pressure anomalies (92% acc).
- Cleaned and normalized real-time noisy sensor time-series data using moving-window averages and standard deviation filtering.
- Visualized pressure degradation curves and flow rate distributions using Matplotlib and Seaborn for predictive maintenance.

Role: Solo Project — Data Analytics & System Design

Tech Stack: Python, Scikit-Learn, Pandas, NumPy, Matplotlib, MQTT, Sensor Telemetry

Rewards & Achievements

- 2x Winner, National Electronic Quiz Competition (Quizotronics)
- Runner-up, State-level chess championship
- Participated in 4^+ Hackathons and Technical Data Competitions
